1 The incidence rates represent the number of injuries and illnesses per 100 full-time workers and were calculated as: (N/EH) x 200,000, where

= number of injuries and illnesses

= total hours worked by all employees during

the calendar year
200,000 = base for 100 equivalent full-time workers
(working 40 hours per week, 50 weeks per year).

- 2 Data for 1976-1987 are based on the Standard Industrial Classification Manual, 1972 Edition; and data for 1988-2000 are based on the Standard Industrial Classification Manual, 1987 Edition.
- 3 Total includes cases involving restricted work activity only in addition to days-away-from-work cases with or without restricted work activity.
- 4 Days-away-from-work cases include those which result in days away from work with or without restricted work activity.
- 5 To maintain historical comparability with the rest of the series, data for small nonfarm employers in low-risk industries who were not surveyed were imputed and included in the survey estimates.
 - 6 Data exclude fatal work-related injuries and illnesses.

NOTE: Because of rounding, components may not add to the totals. Data exclude farms with fewer than 11 employees.
